MAHAMMADZADA RASHAD

Backend Software Engineer (Java / Spring Boot)

+994 50 592 99 24 • mahammadzader@gmail.com • linkedin.com/in/rashad-mahammadzade

SUMMARY

Backend Software Engineer with 2+ years of experience building Java and Spring Boot applications using REST APIs, SQL/PostgreSQL, OOP principles, and design patterns within microservices-style and Agile/Scrum environments. Experienced integrating third-party APIs, writing unit and integration tests, and optimizing application and database performance. Comfortable collaborating with cross-functional R&D, QA, and business teams to deliver and document new features. Continuously expanding expertise in cloud and DevOps technologies.

TECHNICAL SKILLS

Languages & Frameworks: Java, Spring Boot, SQL (PostgreSQL)

APIs & Protocols: RESTful APIs, HTTP

Architecture & Design: Object-Oriented Programming (OOP), Microservices Architecture, Design Patterns

Testing: Unit & Integration Testing, JUnit, Mockito, Postman

Tools & DevOps: Git, Docker, Kafka, Redis; working knowledge of Kubernetes and Jenkins (CI/CD)

Methodologies: Agile/Scrum (sprint planning, daily standups, backlog grooming)

Cloud & Data: AWS (Lambda, S3, DynamoDB, Cognito), MongoDB

WORK EXPERIENCE

Software Engineer, EPAM Systems *April 2026 – Present*

EPAM Systems is a global provider of digital platform engineering and software development services, serving clients across finance, healthcare, retail, and other industries.

- Participating in a full-time professional development program in enterprise Java backend development, working in Agile/Scrum sprints through structured technical training, hands-on projects, and collaborative engineering practices.
- Designed and built a backend application end-to-end using Java, Spring Boot, PostgreSQL, and MongoDB, applying OOP principles and design patterns to keep the architecture clean and maintainable.
- Collaborated in a cross-functional team of developers, QA engineers, and business analysts to build and maintain a microservices-style, serverless AWS application using Lambda, S3, and DynamoDB.
- Wrote unit and integration tests with JUnit and Mockito to improve code quality, reliability, and maintainability.

Technologies used: Java, Spring Boot, RESTful APIs, PostgreSQL, MongoDB, AWS (Lambda, S3, DynamoDB, Cognito), Docker, Git, Kafka, Redis, JUnit, Mockito

Backend Software Developer, Kapital Bank OJSC *Sep 2024 – April 2026 (1.9 years)*

Kapital Bank is a leading commercial bank in Azerbaijan, offering retail, corporate, and digital banking services.

- Automated the merchant onboarding process, reducing manual workload by approximately 70% and accelerating new merchant activation.
- Collaborated with a third-party service team to integrate their REST APIs into our backend, working in Agile/Scrum sprints to align requirements and ensure reliable end-to-end functionality.
- Applied OOP principles and design patterns within a microservices-oriented backend to improve code maintainability and scalability.
- Improved unit test coverage by 90% and supported QA with Postman-based integration tests to strengthen overall system reliability.
- Optimized SQL queries against PostgreSQL, reducing execution time by approximately 35% and improving system efficiency.

Technologies used: Java, Spring Boot, RESTful APIs, SQL/PostgreSQL, Docker, Redis, Kafka, Git, JUnit, Mockito

EDUCATION

Bachelor of Physics, Baku State University *Sep 2015 – July 2019*

- Strong quantitative and analytical foundation with coursework in Higher Algebra, Mathematical Analysis, Mechanics, and Nuclear Physics — directly relevant to algorithmic problem-solving in software engineering.

ADDITIONAL INFORMATION

Soft Skills: Problem Solving, Adaptability, Team Collaboration, Strong Communication

Languages: Azerbaijani (native), English (advanced), Turkish (native), Russian (basic)

Awards / Activities: Selected for EPAM's competitive Software Engineering Training Program
